Week 10 Alpha Beta Pruning

```
import math
def minimax(node, depth, is maximizing):
   Parameters:
   is maximizing (bool): Flag to indicate whether the current player is
the maximizing player.
   if node['left'] is None and node['right'] is None:
       return node['value']
       best value = -math.inf
       if node['left']:
            best value = max(best value, minimax(node['left'], depth + 1,
False))
        if node['right']:
            best value = max(best value, minimax(node['right'], depth + 1,
False))
```

```
return best value
       best value = math.inf
        if node['left']:
            best_value = min(best_value, minimax(node['left'], depth + 1,
True))
        if node['right']:
            best value = min(best value, minimax(node['right'], depth + 1,
True))
       return best value
decision tree = {
    'left': {
```

```
'value': 9,
               'left': None,
best value = minimax(decision tree, 0, True)
print(f"The best value for the maximizing player is: {best value}")
```

OUTPUT:

```
The best value for the maximizing player is: 6
```
